Tuesday, March 25, 2008
8:30 a.m. to 4:30 p.m.
Secretary of State Building Auditorium, 1500 11th Street, Sacramento, CA.

Objective
The objective of this workshop is to present an overview of the Delta’s water quality impairment issues that are associated with aquatic plant nutrients (N and P). The focus will be the current state of information available, and still needed, to model and manage excessive fertilization in the Delta. If there is interest, this overview workshop will be followed at a later date by limited-scope workshops devoted to specific topics such as domestic water supply water-quality concerns, agricultural nutrient sources and their control, and modeling nutrient load–chlorophyll response in the Delta.
